

Pilot integration

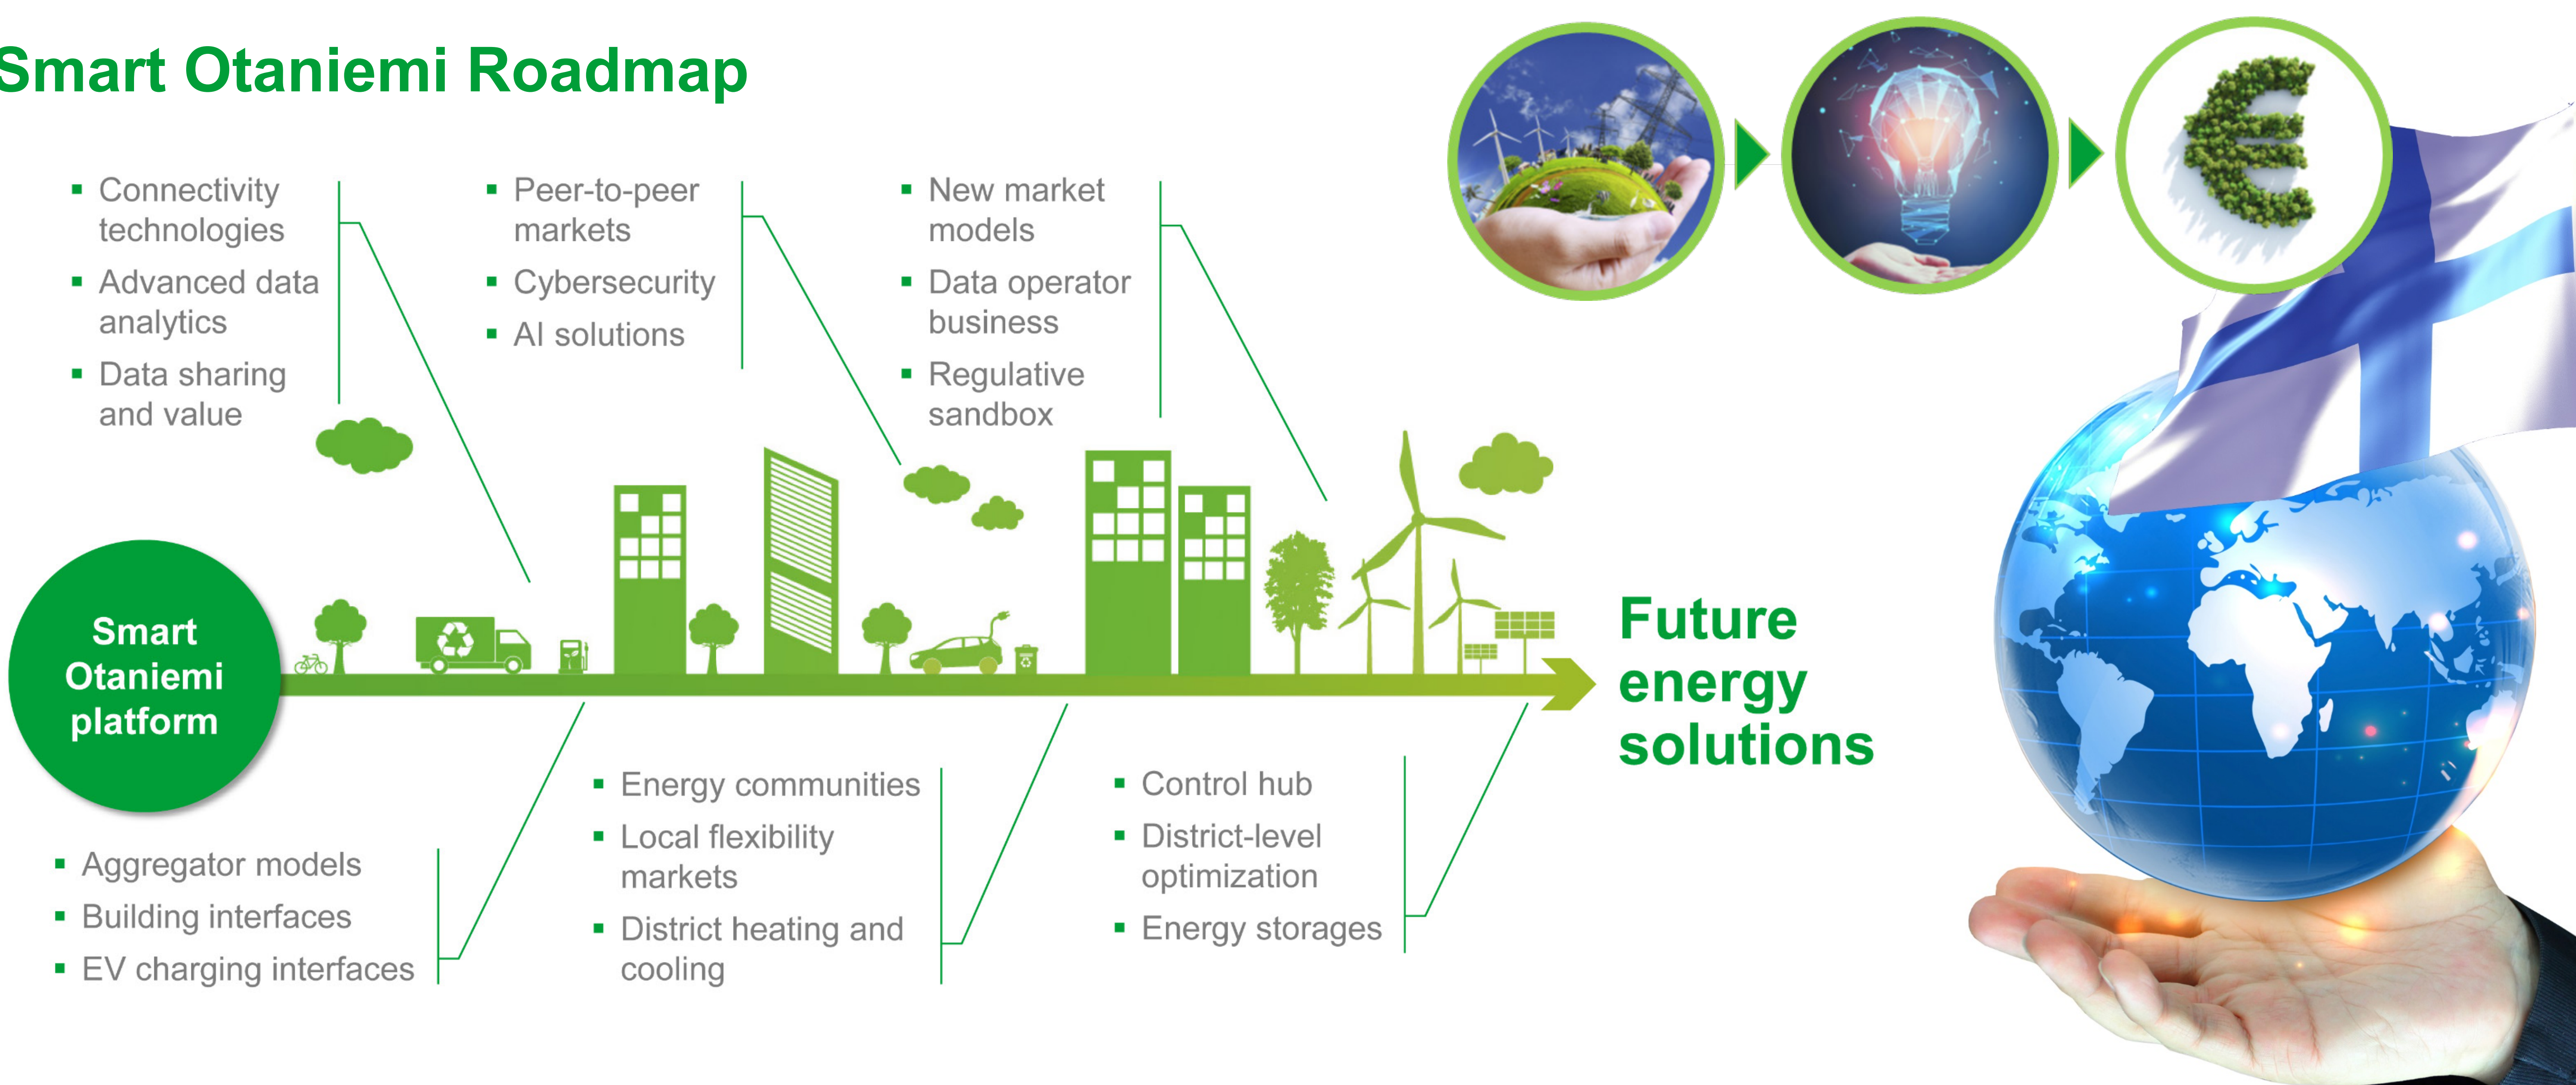

Challenges

As smart energy systems are highly interlinked, separate individual pilots are not adequate for reaching cross-cutting new solutions. To assure synergies, this work package is responsible for integration both between individual Otaniemi pilots as well as between Smart Otaniemi and other platforms.

Goals

- To integrate and coordinate individual pilots and co-operate with other ecosystems
- To develop Smart Otaniemi roadmap
- To co-operate in international networks of smart energy
- To raise and process new company-driven pilots

Smart Otaniemi Roadmap

Focus areas and on-going pilots
